

Field Bulletin

- SC Series Bill Validators
- Currency Pretest Procedure

Bulletin #:	FG00806
Bulletin Date:	June 20, 2006
Subject:	SC Series Currency Pretest Procedure
Affected Model(s):	All SCXXXX

Summary:

This bulletin covers the steps involved in the Currency pretest procedure for all SC series bill validators after a new software download has been performed. Following this procedure will ensure the most accurate results possible when implementing any other type of test you may wish to perform.

Detail:

To ensure maximum acceptance rates of a currency, each **series** of the notes selected to test must be run through the SC series bill validator five times each in all 4 orientations.

Note: Refer to the last page of the software identity card for all of the series of notes that are part of the software variant that is being tested.

Action:

Steps

1. Power up the SC series bill validator.
2. Download the appropriate software.
3. If the test procedure is being performed outside of a Slot machine, the SC series must be placed in stand-alone mode so that it is enabled to accept notes. An enabled SC bill validator is indicated by an illuminated solid Green MMI led. (see red arrow)

4. Make sure all of the different series of the notes for the currency you are testing are accounted for before proceeding with the pretest.
5. Each series of the note(s) you chose must be accepted by the SC series five times each in all 4 orientations.

Contact your MEI representative for any further questions regarding this procedure.
