

Instructions for Bluebird One Top Box and Lower 3" x 4" Lower Light Panel

- 1) Remove top box display glass to expose fluorescent, light reflector tray and power distribution panel.
- 2) Remove Light Pro panel from box and remove plastic protective coverings for each side of panel. Check for damage.
- 3) Power down game.
- 4) Open door of game and remove CF5DS compact fluorescent bulb from socket and fluorescent in top box.
- 5) Connect Suzo-Happ power harness #70-0215-00 to power panel located on the left side of the top box. Run harness down internal left side of cabinet and secure with cable ties. (cable ties not included)
- 6) Connect light panels to power harness. Turn on game to display brighter side of panels.
- 7) Power game down.
- 8) Make four two-inch strips from the dual sided foam tape provided. The panel includes approximately 30" of two sided foam tape for additional installations.
- 9) Attach the four foam strips to the rear corners of the Suzo-Happ Led top box panel.
- 10) Remove the protective cover from the 2" foam strips.
- 11) Install the #70-36590-00 top box LED panel to the very top of the reflective light tray. Installing at the very top enhances the LED light illumination across the entire glass.
- 12) Take the #70-36587-00 and remove the plastic protective coverings from each side of the LED panel.
- 13) Included in the box is a 4" piece of two side foam tape. Cut the foam tape into two pieces and install to the top and bottom of the 3" x 4" LED panel. Secure the LED panel to the inside of the entry door that allows you to remove the CF5DS compact fluorescent bulb.
- 14) Turn on game and check for proper operation
- 15) Re-install top box glass and make sure harness is secured.

Thank-You for purchasing the Suzo-Happ Light Pro LED Panel.
