The Next Generation in High-Performance Cashless Ticket Printing from the Leader

The new PSA-66-2N builds on the exceptional success of our PSA-66 printer, the industry's first cashless ticket printer and the market leader. Innovations include ticket presentation only after complete printing; high-visibility, high-speed ticket reveal; increased ticket capacity; and features that significantly streamline maintenance. This new functionality eliminates paper jamming and illegible printing caused by players pulling on the ticket before printing is complete. And capacity for up to 800 tickets minimizes machine downtime and labor costs associated with paper replenishment. The new printer is hot swappable and includes a port for firmware downloads directly from a PC for easy upgrades or replacement. The PSA-66-2N offers an exceptional level of operational reliability and consistent print quality with ticket presentation speed of 6 in./sec. and high print resolution of 8 dots/mm for numbers, bar codes, characters, and graphics such as logos and promotions. Plus, the fanfold, perforated ticket stock can be pre-printed in full color on the non-thermal side.

- Up to 800 ticket capacity
- Ticket held until fully printed
- Ticket bursted automatically
- Fast ticket presentation
- High visibility ticket reveal
- All electronics in main unit
- Firmware download port
- High-impact, lightweight
- Anti-pinch cable
- Hot swappable
- PSA-66 compatible
- Two-year factory warranty
